

Feature to Test	Test Case	Test Steps
Request Creation	Manager creates request	Call createRequest(description, value, recipient)
Request Creation	Reject non-manager	Non-manager calls createRequest()
Request Creation	Validate fields saved	Create request → check requests[0]
Request Creation	Default state check	Check request.completed
Request Voting	Only contributors vote	Non-contributor calls voteRequest(0)
Request Voting	Contributor votes once	Contributor calls voteRequest twice
Request Voting	Vote count updates	3 contributors vote on request
Request Voting	Reject vote on completed request	Finalize → then call voteRequest(0)
Fund Release	Only manager finalizes	Non-manager calls finalizeRequest(0)
Fund Release	Majority approval required	Less than 50% votes → finalizeRequest
Fund Release	ETH transferred	Enough approvals → finalizeRequest(0)
Fund Release	Request marked completed	Call finalizeRequest → check request.completed
Fund Release	Prevent double finalization	Call finalizeRequest twice

Test Data	Expected Result
desc='Buy Materials', value=2	Request stored with completed=false
-	Reverts: Only manager can create request
-	Description, value, recipient saved correctly
-	completed = false
-	Reverts: You are not a contributor
-	Reverts: You have already voted
3 votes	voteCount = 3
-	Reverts: Request already completed
-	Reverts: Only manager can finalize
-	Reverts: Not enough approvals
value = 2 ETH	Recipient receives ETH
-	completed = true
-	Reverts: Request already completed

Actual Result	Pass/Fail
Request created successfully, completed=	Pass
Reverted with correct error message	Pass
All values saved and retrieved correctly	Pass
completed returned as false	Pass
Reverted with correct error	Pass
Second vote reverted as expected	Pass
Vote count updated to 3 correctly	Pass
Reverted with correct error	Pass
Reverted with correct error	Pass
Reverted with correct error	Pass
ETH transferred successfully	Pass
completed set to true	Pass
Reverted on second attempt	Pass
